The CES of the Balearic Islands organizes a technical consultation to work towards the synthetic sustainability indicator

13/06/2022

The meeting with the territorial agents is a step forward in shaping the environmental index

The technical consultancy for the sustainability indicator took place in the Economic and Social Council (CES) of the Balearic Islands © CES

The ERF team that is in charge of [developing a global indicator that will measure the general state of the environment in the Balearic Islands](#) [1] met on May 24 with the Economic and Social Council (CES) of the Balearic Islands. This indicator has the goal of creating an integrating measurement system that reflects the Balearic territory as a whole, taking into account the singularities and conditioning factors of each island.

The session was attended by the heads of the different areas and Balearic organizations, who shared their environmental and territorial knowledge to enrich and contrast the initial design of the partial indicators. At the meeting, the views of other members of the CES were incorporated through a previously conducted survey.
